

The Euroflex 'One Press' has a well proven record of providing production capability for multiple applications. With only minor changes in specification, just one Euroflex can print polyamide food casings and polybags, ABL/PBL tube barrier laminates, aluminium lids, labels, boards, packaging and shrink sleeve films.

With a press design based on either single or twin central impression drums, pin-point print register is assured; whilst an extensive range of options including combination print processes, many in-line converting features and non-stop production, guarantees maximum press utilisation. Dual-pass printing further enhances the colour capacity of the Euroflex.

### OPTIONAL FEATURES

1. STS Automatic Flying Splicer

2. Varnish Unit

3. Rotary Die

4. Pre Stretch Device

5. Back Slitter

6. Waste Rewind

7. Shear Knife Slitting

8. Expanding Cores 3"- 6"

9. STR Automatic Turret Rewind

### CUSTOMER SERVICE

KPG designs and builds customised presses to meet very specific application requirements in terms of innovative technology, precision engineering, high quality printing and production performance.

KPG continuously monitors market trends and packaging/labelling industry standards, both commercial and mandatory. Also where appropriate, to work in partnership with OEM suppliers and manufactures of consumables such as inks and substrates, to develop press technology to meet changing requirements.

We recognise our customers' needs and as such, provide application advice, technical support and training, in order that they can maximise their profits, through efficient utilisation of their KPG presses. Spare parts are available for Ko-Pack / KPG Presses

### AFTER-SALES SUPPORT

KPG provides worldwide technical after-sales support with engineers based in Europe, Japan and the USA. Additionally, an extensive distributor network provides customers with local technical service. From time to time, used presses are also available.

### EXCHANGE SERVICE

To minimise press down time, KPG offers an exchange service on the following:  
 • Central impression drums • Stack impression drums • Print units • Flatbeds

# Euroflex 'One Press'

**Just 'One Press' is able to print polyamide casings, ABL/PBL tube laminates, labels, packaging and shrink films,**

**The Euroflex 'One Press' represents an exceptional return on investment.**

Available with 6 or 8 colours on a single temperature controlled impression drum, (1000mm/1800mmdia) the flexibility of this press, provides production capability to meet the demands of different market applications.

Can be fitted with flying splicer and turret rewind for non-stop production. High print quality and reliability are key features, with the Euroflex designed to operate at high speeds - 24 hours/day, 7 days/week. (Illustrated without UV system and corona treater)

**Euroflex 260 casing press**

This Euroflex Casing Press is designed for non-stop production, at speeds exceeding 100m/min (depending on substrate and design).

With two temperature controlled impression drums, each with 6 flexo print units, the press is fitted with front-to-back print registration and a scraper system to facilitate 360° all-round graphic designs. Polybags, barrier laminates and films can also be printed. Also available with a 400mm web width. ABL/PBL

**Euroflex 260 tube and label press**

8-colours on an 1800mm central impression drum. Designed for printing ABL/PBL tube laminates and labels. Includes in-line slitting, so that printed rolls are ready for use on tube forming equipment. Available with flexo or letterpress printing.

**Euro super booklet label press**

12-colour booklet label press, also suitable for producing a variety of multi-web/multi-substrate marketing products. Versatile web paths and a variety of converting options. Including varnish and laminating. Press available with flexo or letterpress printing.

**Euro 400 super press**

Designed for label production this configuration is ideal for printing aluminium lids and unsupported films 7-colours letterpress or flexo, plus cold foiling, digital printing and in-line simultaneous application of RFID products, onto the printed web.

**Euroflex 260 dual-pass casing press**

The dual-pass design enables 6-colours to be printed on either side of the casing. Fully automatic for non-stop production at speeds of 100m/min (depending on substrate and print design). Also available with 8-colours. KPG casing presses with UV curing use specially formulated cationic inks.

**Euro 400 combination press**

8-colours including rotary screen, letterpress, flexo varnish cold foiling and reverse/adhesive side printing. Versatile print configuration for maximum production flexibility. Based on a triple stack design, flexo print units can also be fitted.

KPG specialist presses are designed for specific packaging and labelling applications - applications requiring very precise printing and converting technology, frequently required for difficult to handle substrates and products.

Irrespective of the product application, the design philosophy for all KPG presses, is that all processes should be in-line to achieve maximum production efficiency. Whether the application requires; 360° printing of polyamide food casings, printing and encapsulating phone cards, producing combined booklet and bottle hanger labels, novelty 'window' wrap-around film labels or printing and slitting tube laminates, KPG can design a press to meet these and other very specific requirements.

ToyoKoki, have over 30 year's experience of building customised presses. Offering a choice of web widths, print processes and converting options, the company is widely recognised for high quality engineering and innovative technology to provide new packaging solutions. Toyo/KPG presses are installed throughout the world.

All presses illustrated are available with either a 270mm or 400mm web width.
